

Valve Quick Connect

Product Summary

Adding to our line of superior animal hydration products, Lane introduces our new Quick Connect. As with our entire line of Assured Animal Hydration Products, the Lane Quick Connect is interchangeable with your current equipment. If your current animal housing racks use the competitor's manifold and quick disconnects, the Lane Quick Connect easily replaces them with a superior product at less cost.

The design allows for one-handed release and connection of the animal drinking valve, saving time and reducing stress for your staff. The next time you buy racks, demand Lane Manifolds and Quick Connects for you auto-watering needs.

Features

- Double sealing with medical-grade silicone seals
- 316 stainless steel resists corrosion
- Easy-grip grooves

Benefits

- **Easy to Install**
Easy-grip grooves enable a one-hand disconnect for fast removal while wrench flats also provide easy installation and removal
- **Superior Sealing**
Quick connect seals with the collar retracted. When the valve is removed, the collar stays retracted and sealed. Just push the valve in for an instant sealed connection. No need to pull the collar back to install the valve. The Quick Connect will click when the valve is securely installed.
- **Compact Design**
Since the Quick Connect is smaller than the valve, the animal cage will not hit it during installation, which would cause the valve to eject into the animal cage depriving the animal of water.
